JRF3 & JRF4

Today we flew two flights (JRF03 in the morning and JRF04 in the afternoon). Both flights were in coordination with the Cessna 206. Skies were clear with very low aerosol loading (mid visible AOD 0.05 to 0.07).

All instrumentation on both aircraft worked nominal.

JRF03 lasted 2.2 hours

JRF04 lasted 1.2 hours

We have used 6.9 of 23 J-31 flight hours.

MPL near real-time pictures turn out to be extremely useful for flight planning (thanks to Connor Flynn)

Weather Saturday and Sunday is still promising for flight missions.

Planning on an ALIVE BBQ at Ponca Airport Saturday night.

Thanks to all involved for their great efforts.
